Platform Performance Monitoring Tools

W2K

- HP Insight Manager -- delivers detailed hardware fault monitoring, inventory reporting, and configuration management for HP systems via a web-based GUI or command line
- Microsoft Operations Manager (MOM) -- application installed to monitor hardware and operating system, health and events, with the capability of providing alert notification via email or pager

Mid-Range (SUN and pSeries)

- native performance tools that are part of the Solaris and AIX operating systems
- CPU and memory usage data is collected on a five minute interval throughout prime shift (7 am to 5 pm) daily and is stored in a SAS database, to be used for capacity planning analysis

Mainframe

- native performance tools that are part of the z/OS operating system
- performance tools specific to various on-line transaction monitors (CICS/TS)
- performance tools specific to various database management systems (DB2, ADABAS, etc.)
